IT Health Check

What is it?

Our IT Health Check thoroughly examines your current IT setup to identify strengths, weaknesses, and security risks. You'll receive a comprehensive report detailing our findings. Based on our assessment, we provide tailored recommendations to address critical technical issues and security risks, unlocking opportunities for operational optimization and scalability to ensure uninterrupted uptime and seamless business continuity.

Free Health Check includes:

- Scan for software that has reached the end of vendor support
- Items like low disk space or open ports
- Hardware specs (i.e., RAM, Processor)
- Scheduled tasks
- Patch levels (i.e., what Microsoft patches are missing)
- List of local users on each computer
- Internet speed test (to confirm that customers are getting what they are paying for)
- Server and workstation age (based on the date the operating system was installed)
- List of all network devices (by IP, Name, and open ports)

- List of installed software
- Cybersecurity audit
- Dark Web analysis
- The version of the Operating Systems installed
- Operating Systems that are no longer under vendor support
- List of users from Active Directory
- Date last logged in
- Color-coded to highlight users that have not logged in for over 30 days (and are likely ex-employees)
- List of computers from Active Directory
- Last time those computers connected to the domain

What You'll Get!

Office1's IT Health Report will be a slide deck covering an overview of our findings, a risk and issue score, issue reviews, recommendations, and a roadmap to fix them.
